Services Selection"
Atty. Docket No. CS10422

Appl. No. 09/909,206
Confirm. No. 9769
Examiner S. Balban
Art Unit 2686

1. (Currently Amended) A method in a wireless communication device for dynamically selecting communication services from a plurality of service providers capable of providing communication services to the [a] mobile wireless communication device, comprising:

establishing communication objectives at the device for corresponding communications to be executed by the device;

selecting one of the communication services for each communication to be executed by the device based on the corresponding established communication objectives;

utilizing the selected communication service at least for the communication whose communication objective formed the basis upon which the communication service was selected.

2. (Original) The method of Claim 1, assessing the plurality of communication services relative to the communication objective for each communication before selecting one of the communication services.

3. (Original) The method of Claim 1, assessing a plurality of communication services relative to the communication objective for each communication during a communication.

4. (Original) The method of Claim 1, receiving service information from the plurality of service providers at the device, assessing the communication services by comparing the service information received from the corresponding service providers at the device.

5. (Currently Amended) The method of Claim 4, querying the plurality of service providers for service information before receiving the service information.

6. (Original) The method of Claim 4, storing service information received from the service providers at the device, updating service information at the device.

7. (Original) The method of Claim 1, establishing a communication objective by specifying whether a communication to be executed by the device is a data communication or a voice communication.

8. (Original) The method of Claim 1, establishing communication objectives by specifying at least one characteristic of a communication to be executed.

9. (Original) The method of Claim 8, assessing communication services by determining which communication service optimally satisfies the specified characteristics of the communication to be executed.

10. (Original) The method of Claim 1, establishing communication objectives by weighting at least one characteristic for each communication to be executed.

11. (Original) The method of Claim 10, assessing the communication services by comparing the weighted characteristics of each communication to be executed to corresponding service characteristics of each of the communication services.

12. (Original) The method of Claim 11, selecting a communication service having service characteristics that most closely correlate with the weighted characteristics of the communication to be executed.

13. (Currently Amended) A method in a mobile wireless communication device for selecting communication services available to the [a] mobile wireless communication device, comprising:

establishing a communication objective at the device by identifying a characteristic of a communication to be executed by the device;

assessing a plurality of communication services based on
communication service information, received from a plurality of at least two
communication service providers, by comparing the identified characteristic of
the communication to be executed with a corresponding service characteristic
of each of the [a] plurality of communication services;

selecting a communication service from the plurality of
communication services having the service characteristic that correlates most
closely with the identified characteristic of the communication to be executed
by the device.

Claim 14 (Canceled).

15. (Currently Amended) The method of Claim 13 [14], selecting a
communication service before executing the communication, and selecting a
different communication service during the communication.

16. (Original) The method of Claim 13,
weighting the one or more identified characteristics of the
communication to be executed,

assessing the communication services by comparing the weighted
characteristics of the communication to be executed to similarly weighted
corresponding characteristics of each of the communication services.

17. (Currently Amended) A mobile wireless communication device, comprising:

means for identifying a characteristic of a communication to be executed by the device;

means for assessing service information received from a [plurality of] communication service provider [services] by comparing the identified characteristic of the communication to be executed with corresponding service characteristics of each of a plurality of communication services;

means for selecting a communication service from the [plurality of] communication service provider [services] having the service characteristic that correlates most closely with the identified characteristic of the communication to be executed by the device.

18. (Currently Amended) The device of Claim 17, means for receiving the service information from the [plurality of] communication service provider [services] at the device.

19. (Currently Amended) The device of Claim 18, means for requesting service information from the communication service provider [services].

20. (Currently Amended) The device of Claim 17,
